INVISIBLE BEAD EXTENSIONS®

HOME CARE

1 ***Always use professional products.***
You must always use products that are sulfate/paraben free. Use a leave-in conditioner and treat with a mask once a week if necessary. If applying heat, use a *heat protectant* to protect from drying or discoloration.

2 ***Don't forget a daily serum.***
Daily use of an oil/serum will help to keep your hair soft and manageable. Avoid tinted oils which will tarnish your blonde extensions.

3 ***Follow proper swimming/beach hair prep.***
Rinse hair first with tap water and then liberally apply a leave-in conditioner. Leave your hair wet/damp. Then fasten in a bubble-style braid. **Avoid all sunscreens that contain Avobenzone**. These can turn extension hair pink/peach on blonde hair.

4 ***Take care after activities that cause sweating.***
When engaging in activities in humid conditions or those that cause sweating, such as going to the gym, using steam rooms, or saunas, ensure the extensions are dried immediately afterward. Focus on the weft line to prevent moisture retention and swelling.

5 ***Be diligent about a nighttime prep routine.***
Never go to sleep with wet hair, as it can cause extreme matting and tangling. Place hair in a loose top knot or braid. Use a silk pillowcase to keep hair manageable and frizz-free.

6 ***DO NOT brush the top of the weft.***
Avoid the top of the wefts where the stitching is, as this can cause pulling on the weft, leading to matting and shedding. When this happens, you will need to replace the wefts much sooner.

7 ***Always support the top of the wefts and corners.***
You will do this by pressing down on or holding them when you are brushing, blow drying and styling. This will help to maintain the health of your hair as well as the extensions. Brush hair thoroughly twice a day.

8 ***Separate the hair row by row.***
Separate the hair into sections by row when brushing, shampooing, and blow-drying. This ensures you are being gentle on the hair and prevents unnecessary pulling, which can lead to irritation/damage.

9 ***NEVER pull the hair into a ponytail in the middle back of your head.***
This can put tension on the extensions. Keep it low or fully flipped up and high. Pulling hair back into the middle of your head will cause tension on the front of your extensions and cause your own hair to be pulled out prematurely.
